SUMMARY

Working as a frontend developer, I've had the experience of being able to help with creating great experiences for users. While at Medean, I've had to sharpen my skills and branch out in other areas of development as well, from creating UI for mobile interfaces, to handling build processes and deployment. I'm looking to continue my growth to enter into senior roles as a frontend or fullstack developer.

WORK EXPERIENCE

WORKING

09/2020 - CURRENT

Software Engineer - Frontend Developer / Reputation

World with interconnected teams to build features and solve issues with primary project.

Work across several code bases to developing new features including the use of Angular.js, Node.js, React.js, and Google API.

Solve issues through investigating and developing several solutions that can be presented to the team.

07/2018

Lead Frontend Developer - Medean: Smart Finance

Working from the launch of the company to its current state, I've had the opportunity to have an impact on the growth of the product as a developer. Using react native, I've been able to develop UI from the ground up in a team based environment, develop features and independently and collaborate, and improve the stability of the app through several iterations.

- As Medean's sole developer, launched an Android app using React Native in under 3 weeks while maintaining 100% feature parity with our iOS version
- Implemented cloud based architecture to automate build processes and code maintenance, resulting in a 70% increase in efficiency in developer performance.
- Built custom scripts that communicated with back-end systems to provide visibility into Medean customer engagement and usage through Mixpanel and other analytic SDKs.
- Built custom D3 graphs that visualize user financial data to improve rendering performance
- Implement API requests in node backend services to store and retrieve data from user interactions

05/2017 - 03/2018

Full Stack Developer - Riskbone LLC / Level Trading Field

- Developed new features including the support for crypto- currencies, crypto-exchanges, stock exchanges, and account management features.
- Oversaw the launch of Level Trading Field product as a developer, building features and providing live stability updates for user.

2 YEARS

Multimedia / UI Developer - Medpoint Digital

- UI Developer creating content for their Flash/Actionscript based learn platform.
- Created and rebranded the updated company website, still in use currently
- Created the company blog and several company initiatives to improve communication.

1 YEAR

Frontend Developer - Curse Inc

- Coded and designed stunning websites on the Gamepedia platform for game development companies around the world.

1 YEAR

Junior Game Programmer - LearnDistrict Inc

- Part of the launch team for their flagship product, Penquemic: Word Domination
- Developed company websites and game tooling in Unity Engine
